Kuningan, Setiabudi, Jakarta Selatan

I am a Software Engineer at PT. BANK NEGARA INDONESIA (Persero) Tbk, one of the largest and most reputable banks in Indonesia. Since 2026 I've focused on mobile engineering (iOS & Android) for the Branch Navigation app used by thousands of BNI employees nationwide, while continuing to support backend systems built with ASP.NET Core and SQL Server. I collaborate with a team of talented developers and engineers who share my passion for innovation, collaboration, and growth.

Work Experiences

PT. Bank Negara Indonesia - Central Jakarta, Indonesia

Software Engineer — Mobile 2026 - Present

- Leading mobile development for Branch Navigation, an enterprise app for iOS & Android used by thousands of BNI employees nationwide.
- Implemented biometric authentication (fingerprint & face recognition).
- Implemented push notifications for iOS & Android using Firebase Cloud Messaging, including APNs key/entitlement setup for enterprise iOS distribution.
- Integrated the mobile app with backend microservices via secure REST APIs.
- Applied SAST, penetration testing, and performance testing findings.
- Published Branch Navigation to the Google Play Store.

Software Engineer — Backend Sep 2023 - Present

- Maintained and enhanced backend systems using ASP.NET Core, handling bug fixing, feature development, and performance optimization.
- Improved frontend interfaces built with Razor Pages (ASP.NET MVC), focusing on responsive layout, modular components, and better UX.
- Designed and developed secure RESTful APIs and integrated them into web and mobile platforms.
- Built and maintained server-side logic and SQL Server databases, including stored procedures and performance tuning.
- Designed and implemented multi-stage approval workflow engines (submit → review → approve → extend/close) using a hybrid EF Core and stored-procedure data-access pattern.
- Authored functional and technical specifications for a cross-platform maker-checker approval workflow integrating mobile, backend, and core-banking systems, including security design, audit logging, and reliable retry/sync mechanisms.
- Optimized SQL Server query performance through index-seek and cardinality-estimate improvements.
- Conducts stored-procedure database assessments across authentication, biometric enrollment, employee-benefits, and system-modernization modules to support ongoing change requests.
- Implemented SSO authentication via LDAP and designed role-based access control (RBAC) to support hierarchical roles (pusat, wilayah, cabang, outlet).
- Developed multi-level approval workflows to support business processes involving different levels of authorization.
- Applied server-side caching techniques to reduce database load and improve system responsiveness.
- Handled secure file upload modules (images, documents, Excel) with validation for internal reporting.
- Participated in system upgrades including migration to .NET 8.
- Implemented security fixes based on findings from penetration tests (pentest), and ensured compliance with SAST/DAST practices.
- Supported the SIT, UAT, and PIR phases, ensuring each release met business and technical expectations.
- Collaborated with business analysts to gather and validate requirements, and provided technical insight during refinement sessions.
- Assisted in DevOps processes, including IIS deployment and Ocelot API Gateway setup for internal service routing.
- Ensured secure and maintainable code by following clean architecture principles, conducting code reviews, and updating documentation.

PT. SAB Indo Industries - Cimahi, West Java Mar 2023 - Aug 2023

Web Developer Intern

PT. SAB Indo Industries is a company based in West Java, Indonesia, specializing in the production of sports jerseys, particularly under the brand "Speed Jersey," and is also involved in developing display technology solutions.

- Analyze the existing business processes related to the company's recruitment process.
- Develop an application that facilitates HR in selecting candidates for company job openings.

PT. Bahana Global Solution - Bandung, West Java Sep 2022 - Dec 2022

Mobile Developer Intern

PT. Bahana Global Solutions is a Bandung-based company specializing in Information Technology services and products. They offer customized application development, ready-to-use business applications, and web design and development services. The company focuses on creating tailored technology solutions to meet specific client needs, leveraging their expertise in software development, IT consulting, and more.

- Develop an Android Application PBPRSI using React Native
- Communicate with the backend team regarding API integration
- Create Wireframe using Figma

Education Level

Universitas Komputer Indonesia - Bandung, West Java Sep 2019 - Sep 2023

Bachelor of Informatics Engineering

- Developed a Recruitment Management Information System project as a final thesis.

Skills, Achievements & Other Experience

- **Achievements** (2023): Junior Web Programmer (BNSP)
- **Projects** (2024): Developed a Production Information System project in PT. SAB Indo Industries
- **Projects** (2024): Developed a Forecasting System for Medicines/Medical Equipment for Community Health Centers UPTD Talaga
- **Projects** (2026): Implemented biometric authentication and push notifications (Firebase Cloud Messaging, APNs) for Branch Navigation mobile at BNI
- **Tech Stacks**: ASP.NET Core, JavaScript, PHP (CI), C#, MySQL, SQL Server, Node JS, React, React Native, Firebase, Internet Information Service (IIS)
- **Soft Skills**: Problem solving, Team work, Critical Thinking
- **Tech Skills**: Backend Development, Frontend Development, Mobile Development, UI Design, Automation
